

NWA-500 Board (Optional)

With the NWA-500 PCB, video images can be output with an image repeat rate of 100/120 Hz. Images created by the BSA-500 are used for the display.

The NWA-500 has 4 video outputs (V1 to V4), of which three outputs (V4 - V2) provide a 100/120 Hz image signal. The fourth output (V1) additionally provides a 50/60 Hz image.

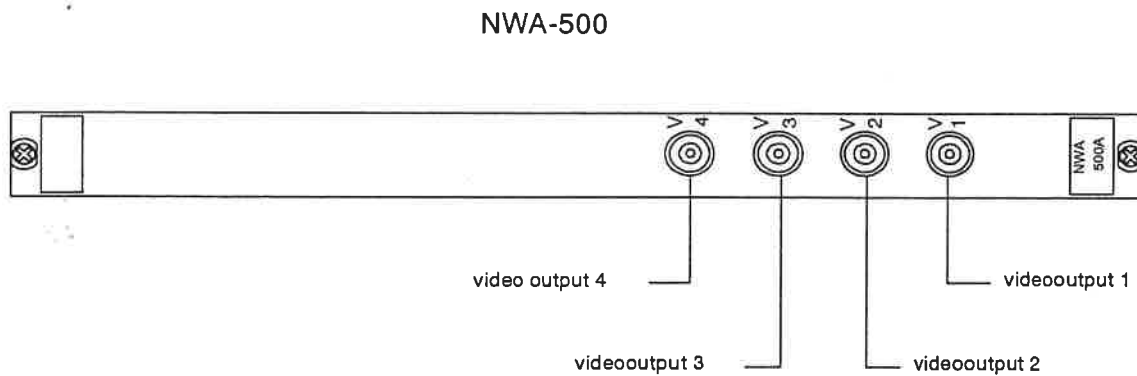

Figure 12 - NWA-500 Front plate

The sync output of the board provides the horizontal (H) and vertical (V) sync signal only for the 100/120Hz field frequency.

The V2 and V3 connections can be switched between 50/60Hz and 100/120Hz by means of jumper J5.
